7000mm x 7000mm

## Colours

Steelwork; Green RAL 6026 - Fabric; White

## Comments

Working with Darland High School was a fantastic experience and gave us the chance to install two Maxima Tepees. They were both installed at 7000mm by 7000mm with steelwork in Green RAL 6026 and a white varnished PVC coated polyester fabric.

The Maxima Tepee is a great option to add instant shelter to almost any area. At Darland High School we were creating two sheltered dining areas and whilst they needed structures at 7000mm x 7000mm we can install at virtually any size, with single units available from 3000mm to 15000mm. Multiple units (common centre beam and uprights) can be used to cover just about any size of area.

You also get a great deal of flexibility with the PVC fabric coming in two weights and many colour options. The steelwork is available in any RAL colour and post padscan look fantastic whether complementing or in contrast to the colour of the

structure. Take a look at our full colour range.

It's always recommended to get in touch with us early so we can help you consider all aspects of an installation and choose the options that work best for you.
